

IEC International conference on LVDC - Sustainable electricity access / Nairobi-Kenya 22 and 23 May 2017

On 22 and 23 May 2017, the IEC will organize in partnership with KEBS (Kenya Bureau of Standards) and AFSEC (African Electrotechnical Standardization Commission) the very first LVDC (low voltage direct current) Conference on Sustainable Electricity Access, in the Hotel InterContinental in Nairobi, Kenya. The event is geared to government representatives, funding agencies, investors, insurance companies, power utilities, equipment manufacturers, project implementers and technical experts active in the area of energy access. The aim is to promote the fast expansion of LVDC as an important tool to accelerate sustainable universal energy access. The conference will collect real needs and requirements that will influence standardization work and key performance and risk assessment indicators. This will allow regulators and systems administrators to benchmark different LVDC solutions. The conference will especially focus on using the World Bank ESMAP Multi-Tier Framework and how LVDC could be the tool for enabling it. The conference will also outline why LVDC is a disruptive technology that will fundamentally change and accelerate energy access and point out opportunities for growth of local economic activities.
